VISHNU ELLUSAMY

Senior DevOps Engineer | Site Reliability & Platform Engineering | Kubernetes · Go · Azure/GCP

e.vishnu55@gmail.com · +91 8344308059 · Coimbatore, India (Remote — Global availability) · linkedin.com/in/e-vishnu · github.com/e-vishnu-gh

SUMMARY

Senior DevOps/SRE engineer with 9+ years operating Kubernetes and cloud infrastructure (Azure, GCP) and building backend systems (Go, Python, Node.js) in enterprise-scale production environments. CKA, CKS, and AZ-104 certified. Delivers independently end-to-end: solo-designed and shipped a full-stack micro-SaaS product (digitalAlbum.io), and built and maintains a production Go CLI that eliminated a recurring manual workflow. Leads a 15-engineer platform team operating a hybrid Azure AKS / on-prem OpenShift estate running 25,000–45,000 CI/CD jobs per day. First-principles operator: fixes root cause, not symptom.

CORE COMPETENCIES

Kubernetes & Platform: AKS, OpenShift, Istio (PoC — traffic control/resilience fit), Cilium/eBPF (incl. kube-proxy replacement), Helm

Cloud & OS: Azure, GCP, Linux

Languages & Automation: Go, Python, Node.js/React, Ansible, Terraform

Data: PostgreSQL, Redis

CI/CD & Delivery: Docker, GitHub Actions (ARC self-hosted runners), GitHub Enterprise, JFrog Artifactory

Observability & Reliability: Datadog, Azure Monitor, incident RCA, MTTR reduction

AI-assisted Engineering: GitHub Copilot (agent mode, daily use), Microsoft Semantic Kernel (multi-agent prototyping)

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer — Bosch Global Software Technologies, Coimbatore, India *Oct 2023 – Present*

- Built a Go CLI (Cobra) against a PostgreSQL/PostgREST API that automates service-ownership reconciliation and customer notification via Azure Communication Services — cut an estimated 390 hours/year of manual Excel + Mail Merge work to roughly 250 hours/year, removing spreadsheet-driven data errors from the outreach.
- Migrated observability from Azure Log Analytics to Datadog (2025–present), building and continuously improving dashboards and alerting; built automated per-service maintenance-window scheduling (created before, auto-deleted after) to suppress alert noise during planned maintenance.
- Ran a PoC evaluating Istio service mesh against AKS platform traffic-control and resilience requirements (CKA certified); operates Cilium (eBPF-based CNI) in production, including kube-proxy replacement.
- Automated GitHub backup, Mattermost monitoring, and AKS version-drift alerting — saving 4+ hours/month of manual toil.
- Drove root-cause analysis for GitHub Enterprise and Artifactory production incidents, shipping fixes that reduced recurrence.
- Owns firewall policy and compliance as Network Zone Manager across segmented Bosch network zones.
- Leads a team of 15 engineers; prototyped multi-agent systems on Microsoft Semantic Kernel.

Senior Software Engineer — Bosch Global Software Technologies, Coimbatore, India *Aug 2021 – Sep 2023*

- Scaled a self-hosted, auto-scaling GitHub Actions runner platform (ARC) across Azure AKS and on-prem OpenShift, running 25,000–45,000 CI/CD jobs/day for internal customer teams.
- Ran GitHub Enterprise, JFrog Artifactory, and Mattermost org-wide for high availability, security, and release readiness.
- Led incident response and root-cause analysis, reducing MTTR; automated patching, backups, and maintenance to cut unplanned downtime.
- Built observability with Datadog and Azure Monitor; wrote automation in Ansible, Python, and Go across Linux, Kubernetes, and OpenShift.

System Engineer — Tata Consultancy Services (Client: SAP Labs), Bengaluru, India *Jul 2019 – Aug 2021*

- Automated infrastructure with Ansible across a fleet of 10,000+ Linux and 900+ Windows servers spanning GCP, AWS, and private cloud.
- Hands-on provisioning, migration, and patching across GCP, Azure, VMware, and Xen; monitored fleet health via Nagios.

System Engineer — Tata Consultancy Services (Client: SAP Hybris), Bengaluru, India *Mar 2018 – Jul 2019*

- Wrote Ansible automation that cut maintenance windows by 75% for server migrations and Apache upgrades on SAP's VMware data center.
- Contributed to upgrade planning, disaster-recovery strategy, and production troubleshooting.

SELECTED PROJECTS

digitalAlbum.io — Micro-SaaS for Wedding Photographers *2026*

Solo-designed and shipped a full-stack product (Go backend, React frontend, REST API, containerized deploy) letting photographers show clients photos on-site at the venue instead of drive transfers or next-day delivery — architecture through iteration built with GitHub Copilot agent mode. Live at digitalAlbum.io.

AI Gateway Architecture PoC — Bifrost vs. LiteLLM *2026*

Led a PoC evaluating AI gateway architectures for a large developer organization's cross-cloud LLM traffic; recommended an approach based on credential blast radius and egress economics. Not implemented, due to a subsequent organizational decision rather than a technical one.

CERTIFICATIONS

CKA — Certified Kubernetes Administrator, The Linux Foundation (renewed Aug 2026, valid through Aug 2028)

CKS — Certified Kubernetes Security Specialist, The Linux Foundation (renewed Aug 2026, valid through Aug 2028)

AZ-104 — Microsoft Certified: Azure Administrator Associate (Oct 2022)
